# Comtrade grains & oilseeds — bilateral monthly trade, 2019 onwards

## Source

UN Comtrade only . No national or Eurostat data.

## Scope

This dataset covers only a selected set of exporting countries, together with all of their partner countries (importers), for a selected set of HS products.

- **Exporters (10):** USA, BRA, ARG, CAN, AUS, RUS, UKR, FRA, KAZ, ROU.
- **Importers:** every partner country that trades with these exporters.
- **Products (HS4):** 1001 Wheat, 1005 Corn, 1003 Barley, 1201 Soybeans, 2304 Soybean meal, 1205 Rapeseed, 1206 Sunflower seed.
- **Period:** monthly, 2019-01 to the latest month each country has reported (2026-08 at most).
- **Rows:** 200,587.

## What the rows contain

- **Flow = Export:** one of the exporters reports its exports to a partner.
- **Flow = Import:** any country reports its imports from one of the exporters (the mirror side).
- Bilateral rows only.

## Columns

| Column | Meaning |
|---|---|
| YearMonth | Reporting month (YYYY-MM) |
| Reporter | Country that declared the flow (ISO3) |
| Flow | Export or Import, from the reporter's point of view |
| Partner | Counterpart country (ISO3) |
| HS4 / Product | HS4 code and its name |
| Value_USD | Trade value in US dollars (exports FOB, imports CIF) |
| Qty_t | Net weight in metric tonnes |

## Notes for use

- The same shipment can appear twice: once as Export (the exporter's declaration) and once as Import (the importer's). **Never add Export and Import rows together.**
- If a trade does not appear on one side (for example Russia, which stopped reporting its exports after 2021-12 and appears only through its partners' Import rows), the rows that do appear are still considered legitimate transactions.
